Explanatory Statement

This technical paper is not part of the Draft Environmental Impact Statement (EIS) referred to in paragraph 6 of the Administrative Procedures made under the Environment Protection (Impact of Proposals) Act 1974.

The Commonwealth Government is proposing to construct and operate a second major airport for Sydney at Badgerys Creek. This technical paper contains information relating to the Badgerys Creek airport options which was used to assist the preparation of the Draft EIS.

The technical paper also assesses the impacts of developing a major airport at the Holsworthy Military Area. On 3 September 1997, the Government eliminated the Holsworthy Military Area as a potential site for Sydney's second major airport. As a consequence, information in this technical paper relating to the Holsworthy Military Area is presented for information purposes only.

Limitations Statement

This technical paper has been prepared in accordance with the scope of work set out in the contract between Rust PPK Pty Ltd and the Commonwealth Department of Transport and Regional Development (DoTRD) and completed by PPK Environment and Infrastructure Pty Ltd (PPK). In preparing this technical paper, PPK has relied upon data, surveys, analyses, designs, plans and other information provided by DoTRD and other individuals and organisations, most of which are referenced in this technical paper. Except as otherwise stated in this technical paper, PPK has not verified the accuracy or completeness of such data, surveys, analyses, designs, plans and other information.

This technical paper has been prepared for the exclusive use of DoTRD. PPK will not be liable to any party other than DoTRD and assumes no responsibility for any loss or damage suffered by any other party arising from matters dealt with in this technical paper, including, without limitation, matters arising from any negligent act or omission of PPK or for any loss or damage suffered by any other party in reliance upon the matters dealt with and opinions and conclusions expressed in this technical paper.

Acknowledgments

Data used to develop the figures contained in this document have been obtained and reproduced by permission of the Australian Bureau of Statistics, NSW Department of Land and Water Conservation, NSW National Parks and Wildlife Service (issued 14 January 1997), NSW Department of Urban Affairs and Planning and Sydney Water. The document is predominantly based on 1996 and 1997 data.

To ensure clarity on some of the figures, names of some suburbs have been deleted from inner western, eastern, south-eastern and north-eastern areas of Sydney. On other figures, only 'Primary' and 'Secondary' centres identified by the Department of Urban Affairs and Planning's Metropolitan Strategy, in addition to Camden, Fairfield and Sutherland, have been shown.

1**INTRODUCTION****1.1 INTRODUCTION**

This volume forms part of *Technical Paper No. 3 - Noise* examining the *Second Sydney Airport Proposal*. It contains noise and predictions from aircraft overflights for each of the three airport options considered.

Detailed noise level calculations were undertaken for 108 Community Assessment Areas as generally shown in *Figure 1.1* and shown in more detail in *Figures 1.2 to 1.11*. These same areas have also been used for definition of demographic population characteristics and assessment of existing noise exposure.

The concept of Community Assessment Areas was introduced to allow noise impacts on individual communities to be described and to relate the noise impacts to estimates of 1996 population, forecasts of 2006 and 2016 populations and to the number of noise sensitive land uses, such as educational facilities. Where these Community Assessment Areas are close to the proposed airport sites, they have been subdivided into smaller areas to give more accuracy to the noise assessment.

For further details on methods used to develop these Areas and forecasts, and for a detailed assessment of potential impacts, reference should be made to *Chapters 11 and 12* of the Draft EIS and/or *Technical Paper No. 3 Noise - Main Volume*.

1.2 USERS GUIDE TO COMMUNITY ASSESSMENT AREA SHEETS

This volume shows potential noise impacts on land uses within Community Assessment Areas. *Figures 1.2 to 1.11* indicate the Community Assessment Area that contains the property you are interested in.

To provide a more accurate description of potential noise impacts, some of these Community Assessment Areas have been subdivided into smaller areas. Reference should be made to *Figures 1.2 to 1.11* to determine whether the property you are interested in is located within a sub-community assessment area.

Social characteristics, existing noise levels and potential noise impacts for each Community Assessment Area are set out on the sheets in *Chapter 2*. They are provided in numeric order.

For each Community Assessment Area:

- Sheet 1 gives an estimate of the 1996 population and forecasts of 2006 and 2016 populations and shows the number of educational facilities and other noise sensitive land uses within the Area. Sheet 1 also presents the results of the background noise measurements within that

Community Assessment Area. These measurements are provided as L_{Aeq} which converts varying noise to an equivalent continuous noise level for a specified period of time, and L_{A90} which is the level of noise which is exceeded 90 percent of the time; and

- Sheet 2 shows the noise levels anticipated from each airport option for each of the two key years assessed, that is, 2006 and 2016. The Table in the bottom half of Sheet 2 shows the range of noise levels resulting from the range of assumptions about aircraft movements and airport operations that were made as part of the noise assessment studies. The source information is shown again in graphic form on the top half of Sheet 3 as this provides a quicker means of comparing the impacts of each airport option on a particular Community Assessment Area.

If the Table in the bottom half of Sheet 2 says Refer over page, this means that the Community Assessment Area has been subdivided into smaller areas ('sub-community assessment areas') to provide a more accurate description of potential noise impacts for a particular airport option.

ANEC levels are shown; information on how to interpret these levels is provided in Figures 5.28 and 5.29 of Technical Paper No. 3, *Noise - Main Volume*.

Additional noise indicators used include the number of noise events expected on an average day that would be over 60 dBA, 70 dBA, 80 dBA and 90 dBA. Noise events over 70 dBA are loud enough to disturb normal conversation and other quieter activities, such as television viewing at home.

The Table also shows the number of noise events in the night-time (10.00 pm to 6.00 am) and gives a Sleep Disturbance Index. This Index tells how many times a night (between 10.00 pm and 6.00 am) the average sleeper is likely to be awakened by aircraft noise. In most cases, it is less than once a night. Some examples of how to interpret these figures:

- a Sleep Disturbance Index of 0.1 means, on average, one awakening every 10 nights;
- a Sleep Disturbance Index of 0.2 means, on average, one awakening every five nights;
- a Sleep Disturbance Index of 0.5 means, on average, one awakening every two nights;
- a Sleep Disturbance Index of one means, on average, one awakening every night; and
- a Sleep Disturbance Index of 1.5 means, on average, three awakenings every two nights.

The impacts of aircraft overflight noise on sleeping patterns, however, need to be considered in the context of current understanding of sleeping patterns which indicate that, on average, people have about 1.5 awakenings each night for reasons unrelated to noise (Bullen, Hede and Williams, 1996).

The number of noise events over 65 dBA that would occur, on average, between 9.00 am and 3.00 pm each day has been shown. This level of noise would be likely to disturb teaching activities.

Note: 1. These forecast L_{Aeq} noise levels are for aircraft overflight noise only and do not include existing noise levels.

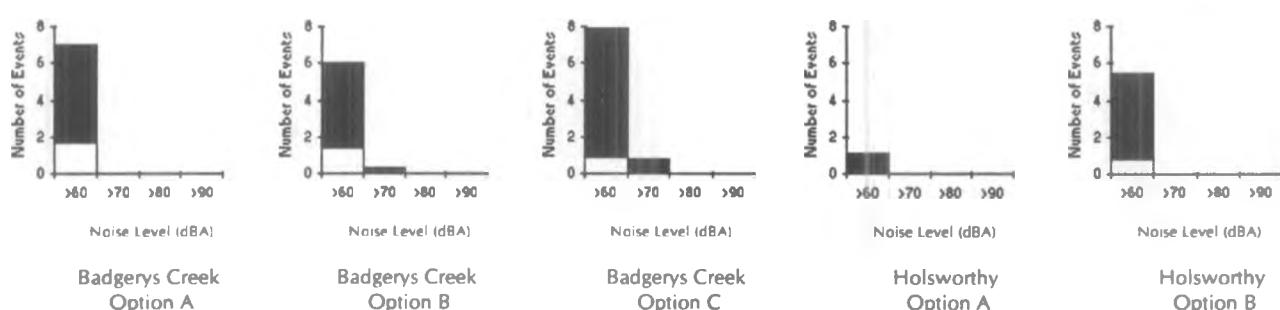

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Sleep Disturbance Index	0 - 0	0 - 0		0 - 0	0 - 0		0 - 0	0 - 0	0 - 0	0 - 0

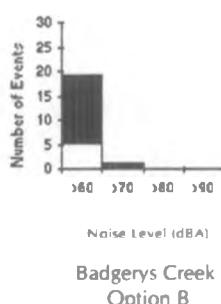

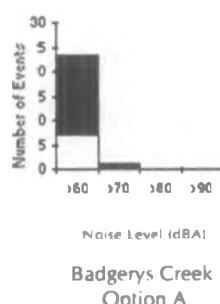

Note: 1. These forecast LAeq noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

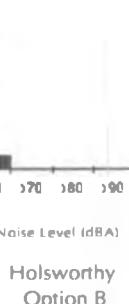

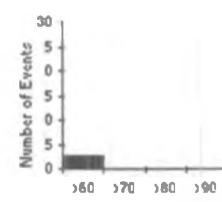

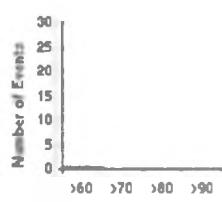

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Sleep Disturbance Index	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0.1	0 - 0	0 - 0	0 - 0	

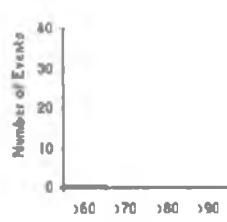

Note: 1. These forecast L_{Aeq} noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

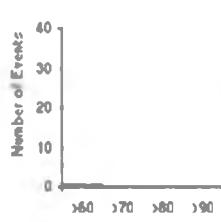

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

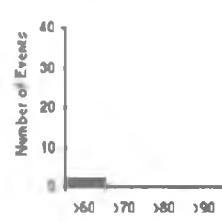

2016 - Number of Noise Events per 24 Hours (on average):

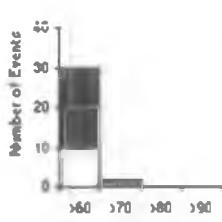

Badgerys Creek Option A

Badgerys Creek Option B

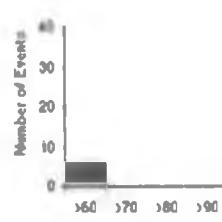

Badgerys Creek Option C

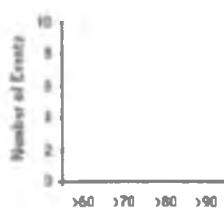

Holsworthy Option A

Potential Range of Events

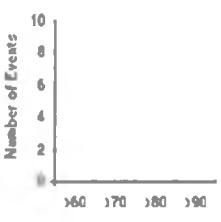

Holsworthy Option B

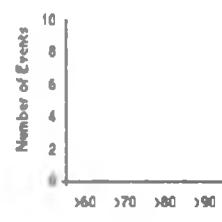

2016 - Number of Noise Events at Night (on average 10pm to 6am - no curfew):

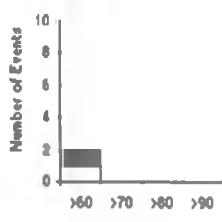

Badgerys Creek Option A

Badgerys Creek Option B

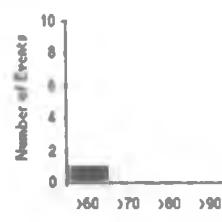

Badgerys Creek Option C

Holsworthy Option A

Potential Range of Events

Holsworthy Option B

AIRCRAFT OVERFLIGHT NOISE FOR AIRPORT OPTIONS

Community Assessment Area No. 25

SHEET 1 / 4

Social Characteristics:

Year	1991	1996	Badgerys Creek				Holsworthy					
	Census		2006	Options A and B	Option C	2016	Options A and B	Option C	2006	Options A and B	2016	Options A and B
Estimated Population	470	450	470	500		470	500		500	500	500	500

Over 65 dBA (9am-3pm)	21 - 73	33 - 64	19 - 71	28 - 62	26 - 74	42 - 67	12 - 56	22 - 50	6 - 38	13 - 35
Sleep Disturbance Index ⁴	0.4 - 0.9	0.4 - 0.8	0.3 - 0.8	0.3 - 0.7	0.4 - 0.7	0.5 - 0.7	0.2 - 0.4	0.2 - 0.4	0.1 - 0.3	0.1 - 0.3

Note: 1. These forecast LAeq noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Over 65 dBA (9am-3pm)	0 - 0	1 - 10	0 - 0	0 - 2
Sleep Disturbance Index ⁴	0 - 0	0 - 0.1	0 - 0	0 - 0

Note:

1. These forecast L_{Aeq} noise levels are for aircraft overflight noise only and do not include existing noise levels.
2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.
3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.
4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

AIRCRAFT OVERFLIGHT NOISE FOR AIRPORT OPTIONS

Community Assessment Area No. 38

SHEET 1 / 11

Social Characteristics:

Year	Badgerys Creek												Holsworthy					
	1996			2006			2016			1996		2006		2016				
	Option A	Option B	Option C	Option A	Option B	Option C	Option A	Option B	Option C	Options A&B	Option A	Option B	Option A	Option B	Option A	Option B

Notes: 1. Population estimates for 1996 are different for each option because they exclude the area of the option which differs between Option A, B and C.

2. Rounded to nearest 10.

3. Numbers of educational facilities in 2006 and 2016 are estimates of the facilities that would be required to service the estimated population in those years.

4. Includes hospitals, churches, aged persons facilities and child care centres.

5. Not estimated for future years.

Existing Noise Environment (in decibels):

L _{Aeq}	7am to 7pm	48, 53	L _{A90}	7am to 7pm	36, 38

Note: 1. These forecast L_{Aeq} noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Note: 1. These forecast L_{Aeq} noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Sleep Disturbance Index ⁴		0 - 0			0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	

Note: 1. These forecast LAeq noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Over 70 dBA per Night	2 - 5	4 - 9	0 - 2	1 - 3
Over 80 dBA per Night	0 - 3	1 - 3	0 - 1	0 - 1
Over 90 dBA per Night	0 - 0	0 - 0	0 - 0	0 - 0
Over 65 dBA (9am-3pm)	17 - 54	38 - 69	1 - 12	5 - 19
Sleep Disturbance Index	0.2 - 0.4	0.3 - 0.6	0 - 0.2	0.1 - 0.2

Note: 1. These forecast L_{Aeq} noise levels are for aircraft overflight noise only and do not include existing noise levels.
 2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.
 3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.
 4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

AIRCRAFT OVERFLIGHT NOISE FOR AIRPORT OPTIONS

Community Assessment Area No. 42

SHEET 1 / 14

Social Characteristics:

Year	1991 Census	1996	Badgerys Creek				Holsworthy			
			2006		2016		2006		2016	
	Options A and B	Option C	Options A and B	Option C	Option A	Option B	Option A	Option B	Option A	Option B
Estimated Population	161	200	200	200	200	210	200	200	210	210
Educational Facilities ²		1	1	1	1	1	1	1	1	1
Other Noise Sensitive Land Uses ³		0	N/E ⁴	N/E						

Notes: 1. Rounded to nearest 10.

2. Numbers of educational facilities in 2006 and 2016 are estimates of the facilities that would be required to service the estimated population in those years.

3. Includes hospitals, churches, aged persons facilities and child care centres.

4. Not estimated for future years.

Existing Noise Environment (in decibels):

L_{Aeq}	7am to 7pm	49, 48	L_{A90}	7am to 7pm	31, 35
	7pm to 10pm	43, 51		7pm to 10pm	33, 41
	10pm to 7am	43, 46		10pm to 7am	27, 28

Monitored at: 495 Wolstenholme Ave, Greendale, Lot 10, Greendale Road, Greendale

Over 80 dBA per Night	0 - 0	0 - 2	0 - 0	0 - 1	0 - 0	0 - 0	0 - 0	0 - 0
Over 90 dBA per Night	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0
Over 65 dBA (9am-3pm)	2 - 14	22 - 42	2 - 14	10 - 30	1 - 4	7 - 19	0 - 2	3 - 8
Sleep Disturbance Index	0 - 0.1	0.3 - 0.4	0 - 0.1	0.2 - 0.3	0 - 0	0.1 - 0.1	0 - 0	0 - 0.1

Note: 1. These forecast L_{Aeq} noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Sleep Disturbance Index	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0		0 - 0		0 - 0

Note: 1. These forecast LAeq noise levels are for aircraft overflight noise only and do not include existing noise levels.

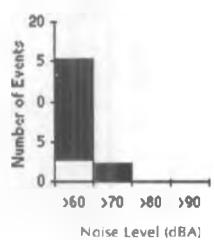

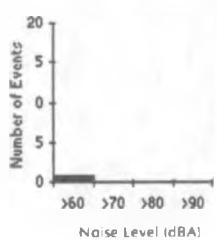

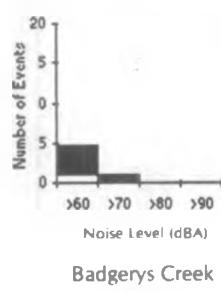

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

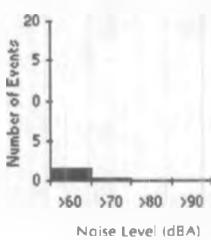

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Holsworthy Option A

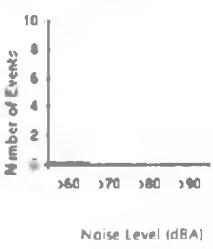

Holsworthy Option B

Social Characteristics for Holsworthy Option A:

	Sub Area: 56.A1			Sub Area: 56.A2		
	1996	2006	2016	1996	2006	2016
Estimated Population ¹	3140	3920	3920	0	0	0
Educational Facilities ²	0	0	0	0	0	0
Other Noise Sensitive ³ Land Uses	1			0		

Notes: 1. Rounded to nearest 10.

2. Numbers of educational facilities in 2006 and 2016 are estimates of the facilities that would be required to service the estimated population in those years.

3. Includes hospitals, churches, aged persons facilities and child care centres. Not estimated for future years.

Noise Indicators for Holsworthy Option A:

	Sub Area: 56.A1		Sub Area: 56.A2

L _{Aeq} 24 Hour ¹	34 - 44	40 - 46	43 - 50	49 - 52
L _{Aeq} 10pm-6am ²	25 - 33	30 - 34	33 - 40	38 - 41
ANEC ³	-1 - 9	16 - 20	8 - 16	13 - 18
Number of Noise Events ⁴				
Over 60 dBA per 24 Hours	1 - 28	83 - 159	28 - 94	82 - 146
Over 70 dBA per 24 Hours	0 - 2	21 - 62	2 - 22	8 - 31
Over 80 dBA per 24 Hours	0 - 0	0 - 2	0 - 1	0 - 1
Over 90 dBA per 24 Hours	0 - 0	0 - 0	0 - 0	0 - 0
Over 60 dBA per Night	0 - 2	7 - 13	3 - 7	7 - 10
Over 70 dBA per Night	0 - 0	2 - 4	0 - 2	1 - 2
Over 80 dBA per Night	0 - 0	0 - 0	0 - 0	0 - 0
Over 90 dBA per Night	0 - 0	0 - 0	0 - 0	0 - 0
Over 65 dBA (9am-3pm)	0 - 5	22 - 57	5 - 28	18 - 40
Sleep Disturbance Index ⁴	0 - 0	0.2 - 0.4	0.1 - 0.2	0.2 - 0.2

Note: 1. These forecast L_{Aeq} noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Over 65 dBA (9am-3pm)	0 - 4	0 - 4		1 - 6	1 - 2		0 - 1	0 - 0	0 - 1	1 - 2
Sleep Disturbance Index	0 - 0	0 - 0		0 - 0	0 - 0		0 - 0	0 - 0	0 - 0	0 - 0

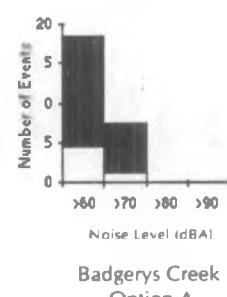

Note: 1. These forecast LAeq noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

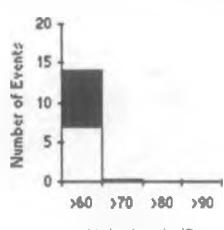

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Sleep Disturbance Index	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0		0 - 0		0 - 0

Note: 1. These forecast LAeq noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Note: 1. These forecast LAeq noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Sleep Disturbance Index											

Note: 1. These forecast LAeq noise levels are for aircraft overflight noise only and do not include existing noise levels.

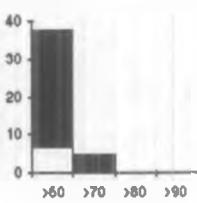

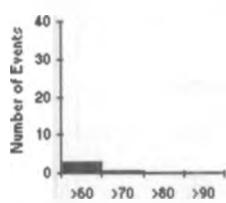

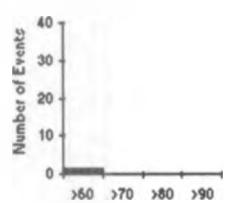

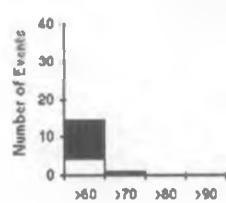

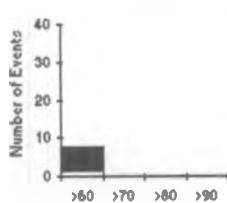

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

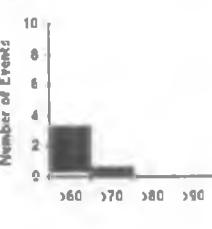

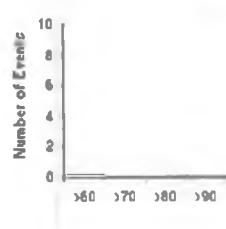

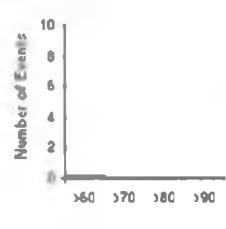

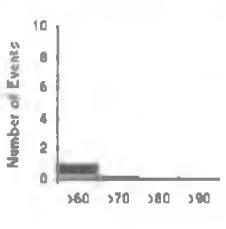

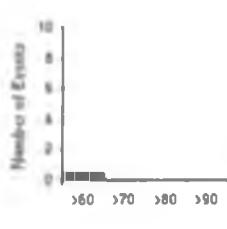

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

Sleep Disturbance Index	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0	0 - 0

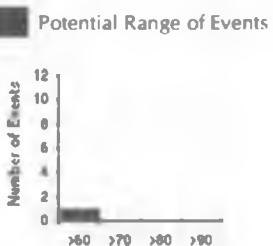

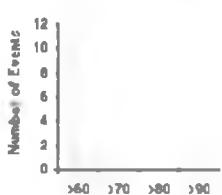

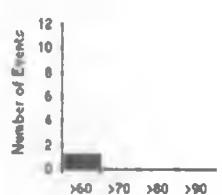

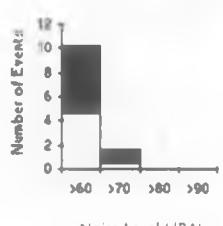

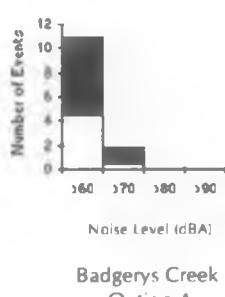

Note: 1. These forecast LAeq noise levels are for aircraft overflight noise only and do not include existing noise levels.

2. The ANEC formulation allows negative ANEC values to be calculated. ANEC values of zero or less than zero indicate relatively minor noise effects.

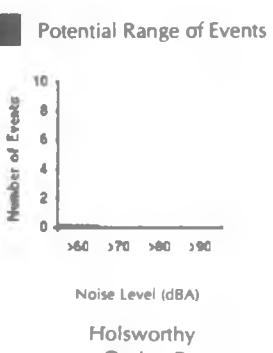

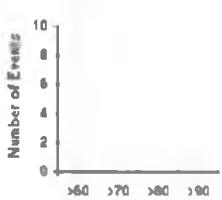

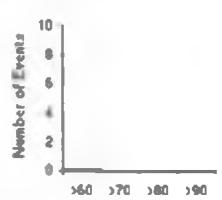

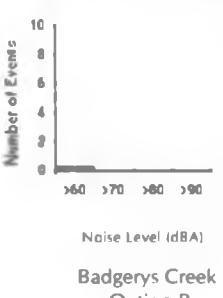

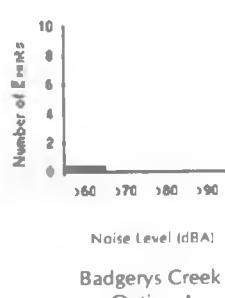

3. Event values are rounded to the nearest whole number. Zero values represent those results less than 0.5 events per period.

4. Sleep Disturbance Index values are rounded to the nearest 0.1. Zero values represent those results less than 0.1.

2016 - Number of Noise Events per 24 Hours (on average):

2016 - Number of Noise Events at Night (on average 10pm to 6am - no curfew):

AIRCRAFT OVERFLIGHT NOISE FOR AIRPORT OPTIONS

Community Assessment Area No. 107

SHEET 1 / 2

Social Characteristics:

Year	1991		1996		Badgerys Creek				Holsworthy			
			2006		2016		2006		2016			
	Census		Options A and B	Option C	Options A and B	Option C	Option A	Option B	Option A	Option B	Option A	Option B
Estimated Population ¹	16116	17570	18310	18310	18880	18880	18310	18310	18880	18880

Other Noise Sensitive Land Uses ³		44	N/E ⁴	N/E	N/E	N/E	N/E	N/E	N/E	N/E	N/E	N/E

- Notes:
1. Rounded to nearest 10.
 2. Numbers of educational facilities in 2006 and 2016 are estimates of the facilities that would be required to service the estimated population in those years.
 3. Includes hospitals, churches, aged persons facilities and child care centres.
 4. Not estimated for future years.

Existing Noise Environment (in decibels):
